

■ VS CODE TERMINAL COMMAND CHEAT SHEET ■

C / C++ | Python | JavaScript | Git | File & Folder | PowerShell | Shortcuts

■ FILE & FOLDER COMMANDS		■ C / C++ COMMANDS	
Command	Action	Command	Action
<code>dir</code>	List all files (CMD)	<code>gcc file.c -o file.exe</code>	Compile C file
<code>ls</code>	List all files (PowerShell)	<code>g++ file.cpp -o file.exe</code>	Compile C++ file
<code>cd foldername</code>	Go into a folder	<code>.\file.exe</code>	Run compiled file
<code>cd ..</code>	Go back one folder	<code>gcc --version</code>	Check GCC version
<code>cd D:\Codess</code>	Go to specific path	<code>gcc file.c -o file.exe -Wall</code>	Compile with warnings
<code>mkdir newfolder</code>	Create new folder	<code>gcc file.c -o file.exe -g</code>	Compile with debug
<code>rm filename</code>	Delete a file	<code>gcc -o out f.c -lm</code>	Link math library
<code>cp file1 file2</code>	Copy a file	■ PYTHON COMMANDS	
<code>mv file1 file2</code>	Move / rename file	Command	Action
<code>cls</code>	Clear screen (CMD)	<code>python file.py</code>	Run Python file
<code>clear</code>	Clear screen (PowerShell)	<code>python --version</code>	Check Python version
<code>pwd</code>	Show current folder path	<code>pip install package</code>	Install a package
<code>cat filename</code>	Show file content	<code>pip list</code>	Show installed packages
		<code>pip uninstall pkg</code>	Remove a package
		<code>python -m venv .venv</code>	Create virtual env
		<code>.venv\Scripts\activate</code>	Activate virtual env
		<code>deactivate</code>	Deactivate virtual env

■ NODE.JS / JAVASCRIPT		■ GIT COMMANDS	
Command	Action	Command	Action
<code>node file.js</code>	Run JavaScript file	<code>git init</code>	Initialize git repo
<code>node --version</code>	Check Node version	<code>git status</code>	Check file status
<code>npm init</code>	Start new Node project	<code>git add .</code>	Stage all files
<code>npm install package</code>	Install a package	<code>git add filename</code>	Stage one file
<code>npm install</code>	Install all dependencies	<code>git commit -m "msg"</code>	Commit changes
<code>npm uninstall package</code>	Remove a package	<code>git push</code>	Push to remote
<code>npm start</code>	Start project	<code>git pull</code>	Pull latest changes
<code>npm run dev</code>	Run in dev mode	<code>git clone url</code>	Clone a repository
<code>npmx command</code>	Run without installing	<code>git branch</code>	List branches
		<code>git checkout -b name</code>	Create new branch
		<code>git log</code>	View commit history
		<code>git diff</code>	See changes

■ VS CODE COMMANDS		■ TERMINAL KEYBOARD SHORTCUTS	
Command	Action	Shortcut	Action
<code>code .</code>	Open folder in VS Code	Ctrl + C	Stop/Kill running command
<code>code filename</code>	Open file in VS Code	Ctrl + L	Clear screen
<code>code --version</code>	Check VS Code version	Ctrl + R	Search command history
<code>code --list-extensions</code>	List extensions	Ctrl + A	Go to beginning of line
Ctrl + `	Open/close terminal	Ctrl + E	Go to end of line
Ctrl + Shift + `	New terminal tab	Ctrl + U	Delete entire line
Ctrl + Shift + 5	Split terminal	Ctrl + K	Delete to end of line
Ctrl + J	Toggle terminal panel	Ctrl + W	Delete previous word
Ctrl + Alt + N	Run code (Code Runner)	Ctrl + Z	Suspend current process
■■ VERSION CHECK		Ctrl + D	Close terminal session
		Tab	Auto-complete command
		Tab Tab	Show all completions
		Up / Down Arrow	Browse command history
		Ctrl + Shift + P	Command palette
Command	Action		
<code>gcc --version</code>	GCC compiler		
<code>python --version</code>	Python		
<code>node --version</code>	Node.js		
<code>npm --version</code>	NPM		
<code>git --version</code>	Git		
<code>java --version</code>	Java		

■ DAILY WORKFLOW — MOST USED COMMANDS

<pre># Navigate to your project cd D:\Codess\for.you dir *.c # check files # Compile and run C gcc file.c -o file.exe .\file.exe</pre>	<pre># Python python file.py # JavaScript node file.js # Clear screen cls (CMD) clear (PS)</pre>	<pre># Git workflow git add . git commit -m "message" git push # Search history Ctrl+R then type command</pre>
---	--	---

■ COMMON ERRORS & FIXES

Error	Cause	Fix
<code>gcc not recognized</code>	MinGW not installed / not in PATH	Install MinGW, add C:\mingw64\bin to PATH
<code>python not recognized</code>	Python not installed / not in PATH	Install Python, check 'Add to PATH' during install
<code>node not recognized</code>	Node.js not installed	Download and install from nodejs.org
<code>No such file or directory</code>	Wrong folder or filename typo	Use <code>dir *.c</code> to check file exists first
<code>Permission denied</code>	Not running as admin	Right-click VS Code → Run as Administrator
<code>App Control blocked</code>	Windows Smart App Control	Windows Security → App & Browser Control → Off
<code>.exe not running</code>	Missing <code>printf\n</code> or infinite loop	Add <code>\n</code> to <code>printf</code> , check while loop condition
<code>cd not compiling</code>	<code>cd</code> is for navigation only	Use <code>gcc</code> to compile, not <code>cd</code>

■ Pro Tip: Always open your **PROJECT FOLDER** in VS Code (**File → Open Folder**) so the terminal starts in the right directory automatically!
